

Sustainable exhibition wall

Take the printed exhibition wall out of the packaging.

Now unfold the side elements (3 or 4 segments depending on size).

The lower part of the exhibition wall should now be completely visible.

Now fold the remaining segments upwards. Make sure that all segments are moved in parallel so as not to damage the connectors. You need two people for this step.

Now you can align the exhibition wall to fit. Depending on requirements, the outer segments can be aligned forwards or backwards. Make sure the floor is as level as possible for a safe stand.
