

Sustainable Roll Up

Unfold the cassette and take out the three segments of the rod.

Two of the segments contain an inner connecting rod. Start with these two segments and insert them into the opening provided in the cassette.

After assembling the two segments with inner connecting rod, insert the third, hollow segment on top of the other two. The rod is now ready.

Now carefully pull the Roll Up upwards. Make sure that the motif faces the front.

Place the attachment point located on the top rail of the Roll Up on the rod.

Now fold the cassette back. To do this, bend the flaps at the points provided. Make sure that the rear sash faces backwards and is fastened accordingly. This also ensures that your Roll Up stands firmly.

The finished Roll Up is a good 2 m in size and ensures that your presentation is eye-catching and effective. Please ensure that the Roll Up is placed on a level surface as far as possible. In the reverse order, your Roll Up can be quickly packed up again and is ready for the next use.
